Summary

Recent B.Tech graduate in Artificial Intelligence and Machine Learning with skills in AI/ML, Generative AI, and Full-Stack Development. Passionate about building innovative solutions using modern technologies, with a strong interest in AI-driven applications while remaining adaptable to diverse opportunities in the technology domain.

Education

Sreenidhi Institute of Science and Technology	2022 – 2026
Bachelor of Technology in Artificial Intelligence and Machine Learning	CGPA: 9.65
Narayana Junior College	2020 – 2022
MPC (TSBIE)	98.4%

Internships

Intel® Unnati Industrial Training – 2024	Project: GitHub	May 2024 – July 2024
- Built an AI-driven healthcare web app using Flask/Django, HTML/CSS, PHP, and MySQL. - Integrated features such as prediction of symptoms, predictive analytics, and an AI chatbot. - Completed under the theme “Integrated Common Services to Common People” with guidance from assigned mentors.		

Projects

InterviewIQ AI – Real-Time AI Interview Assistant	InterviewIQ AI
<i>Technologies used: Python, FastAPI, React, TailwindCSS, ChromaDB, Grok API</i>	
- Built an AI-powered mock interview platform using speech recognition and LLM-based workflows. - Implemented technical feedback, confidence analysis, and intelligent follow-up question generation. - Integrated resume-based interview simulation with semantic retrieval and vector databases.	
AI Recruitment Copilot – Agentic AI-Powered Hiring Automation Platform	AI-Recruitment
<i>Technologies Used: Python, FastAPI, React, n8n, ChromaDB, Gemini/OpenAI API, MCP</i>	
- Automated resume screening and candidate-job matching using RAG, vector search, and LLM-based skill-gap analysis. - Generated AI-powered candidate summaries, interview questions, and ranking scores to streamline recruiter decision-making. - Orchestrated end-to-end hiring workflows with n8n and MCP, enabling automated interview scheduling and email notifications.	
PneumoDetect AI – AI-Based Pneumonia Detection System	PneumoDetect AI
<i>Technologies used: Python, TensorFlow, MobileNetV2, Streamlit, OpenCV, NumPy</i>	
- Built an AI-powered medical imaging system to detect Pneumonia from chest X-ray images using Deep Learning. - Trained and deployed a MobileNetV2-based model for binary classification of Normal vs Pneumonia cases. - Developed a Streamlit-based web application for real-time prediction, image analysis, and automated diagnosis support.	
HRMS Leave Management Portal – Leave Management System	HRMS
<i>Technologies used: React, PHP, MySQL, JavaScript, HTML, CSS</i>	
- Developed a role-based leave management system for employees, managers, and administrators. - Tested leave workflows, approvals, and leave balance calculations to ensure accurate functionality. - Implemented dashboards, holiday calendars, and reporting features with MySQL-based data management.	

Skills

Programming Languages: Python, Java, SQL, JavaScript, C
Gen AI and AI Engineering: Gen AI, LLMs, Prompt Engineering, RAG, n8n, MCP.
Web Development: HTML, CSS, JavaScript, PHP, React
Machine Learning and Deep Learning: TensorFlow, CNN, OpenCV, Scikit-learn, NLP, Supervised and Unsupervised Learning
Core Competencies: DSA, Problem-Solving
Deployment and Development: Git, GitHub, Vercel, Render
Soft Skills: Critical Thinking, Communication, Time Management, Adaptability

Extra-Curricular Activities

Member, College Robotics Club	2023–2026
Participated in robotics projects and competitions, and volunteered during the college fest.
